SUMMARY

Second-year information security student. I build Telegram bots, LLM automation and trading systems, and ship them to production: systemd services, scripted deploys, tests before changes. I treat LLMs as a constrained component with prompt injection defenses.

EXPERIENCE

TRADING SIGNAL SYSTEM

2026 – present

Commercial development for a client

- › A 7-stage pipeline: Telethon parser for Telegram channels → LLM parsing (n8n + Groq) → Google Sheets registry → operator bot → Bybit orders.
- › Signal screenshots are transcribed by a vision model under an explicit label, so a chart description never becomes an invented trade.
- › The operator confirms each trade with a button. Demo by default, the real account only by flag, a risk guard blocks oversized positions.
- › Trade simulator with MFE/MAE, backtesting over channel history with candle charts and reports. 4 systemd services, 34 test modules.

Python · Telethon · python-telegram-bot · n8n · Groq · Bybit API · Google Sheets API · matplotlib

PROJECTS

CDB — TIMETABLE BOT

2026 · in production

- › Pulls the timetable from a public Yandex Calendar layer, renders a day or a week as an image (SVG → PNG), sends a month as an album.
- › Class reminders, an evening plan for tomorrow, a calendar subscription (.ics via aiohttp and nginx), change notifications.

aiogram · APScheduler · httpx · SQLite · aiohttp · libsvg

SCREWSEC

screwsec.ru

- › SaaS for small businesses: information security policies under Russian data protection law (152-FZ, GOST R 57580) from a 13-question builder, PDF export.
- › Yandex Object Storage + Cloud Functions, LLM on Cloudflare Workers AI; SHA-256, CSP, prompt injection defenses.

YANDEX-CALENDAR-TIMETABLE

open source · MIT

- › The timetable bot core, open source: class parsing, week rendering, .ics export. 12 pytest tests.

EDUCATION

ITHUB COLLEGE, MOSCOW
Information security, 2nd year

SKILLS

LANGUAGE

Python

TELEGRAM

aiogram, Telethon

NETWORK & JOBS

httpx, aiohttp, APScheduler

LLM

Groq, Cloudflare Workers AI, vision models

DATA

SQLite, Google Sheets API

AUTOMATION

n8n, webhooks

INFRA

Linux, systemd, nginx, Docker, Yandex Cloud, Cloudflare

SECURITY

152-FZ, GOST R 57580, CSP, pentest basics

TESTING

pytest, network mocks, offline self-tests

APPROACH

- › Production, not "works on my machine".
- › Honest deadlines, risks flagged upfront.
- › No secrets in code, real money only explicitly.

INTERESTS

Wireless security: LilyGO T-Embed CC1101, Bruce firmware, Sub-GHz, NFC, BLE. Kali Linux, Parrot OS.
